

SCOPES, SCALERS and SADDLE STOOLS

ARE THEY IMPROVING OR WORSENING YOUR HEALTH?

Half day course for the entire dental team

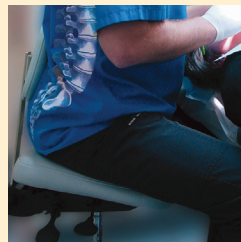

Did you know that improperly adjusted or poorly designed dental loupes can actually cause neck pain?

Based on the latest research, this engaging & interactive seminar will examine how today's most prominent ergonomic products impact your health: **loupes, micro-scopes, extraction tools, intra-oral lighting options, chairs, delivery systems, stools, hand instruments** and **more**. Through wise selection and adjustment of equipment in the operatory, dentists, specialists, hygienists and assistants can work more comfortably, productively and with less fatigue.

COURSE OBJECTIVES

- ✓ Discover the latest ergonomic equipment on the market to improve your health & increase productivity
- ✓ Implement microscope selection and ergonomic modification guidelines
- ✓ Identify the 3 essential criteria for selecting dental loupes that will improve your neck health ... not make it worse!
- ✓ Properly select and adjust delivery systems, stools and chairs depending on operator size, job-type and operatory size
- ✓ Utilize patient positioning aids to improve patient positioning
- ✓ Make economical ergonomic modifications to the operatory with minimal expense
- ✓ Select appropriate ergonomic equipment to effectively address musculoskeletal pain in the back, neck, shoulder and hands
